

Operated by Suncor

Syncrude is one of the largest operations in Canada's oil sands industry, with an over 55-year history of innovation. Based in Fort McMurray, Alberta, and with a large research and development facility in Edmonton, Syncrude is a joint venture operated by Suncor and is known for pioneering many of the processes used in the industry, including an expanding suite of technologies to improve environmental and future economic performance.

While Syncrude's business is about producing the energy Canadians need, how we do it is equally important. We believe in responsible development that encompasses research and innovation, Indigenous and stakeholder engagement, environmental stewardship, providing a respectful and rewarding workplace, and generating shared value across the country and in the communities where we work and live.

# Copper Tubing Photo Frame

Video Tutorial

## What's Included

- 50 ft 1/4" Copper Tubing
- 1 Bending Template
- 1 Lever Bender
- 1 Pipe Cutter
- 1 Instant Camera
- 20 Films

## What You Will Need

- Tape Measure
- Marker Pen
- Clamp

Did you rock these skills? Talk to your teacher to learn more about how you can showcase your skills at Skills Canada Alberta, alongside other students from across the Province!

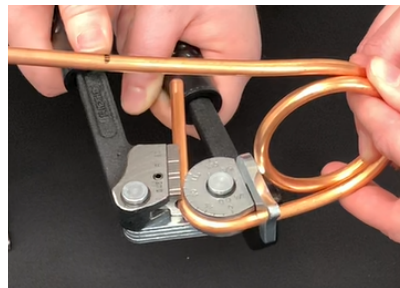

Measure out the copper tube to 24"

Cut the tube using the tube cutters, being careful not to squash the tube

Shape the copper tube using the metal template

Bend the tube legs using the lever benders

Take a photo and add it to your photo frame

And finally, don't forget to share your creations with us on social media!
