

Hello Joinery Competitors and Trainers,

We have had a few questions arise concerning the Zen Stool for this years competition so I will try and answer them for you.

Material provided each contestant:

- All parts will be milled to correct thickness.
- 4 legs with the taper and the bottom angle pre cut. The length and Tenon will be part of the competition.
- Bottom rail will be milled to finished height.
- Spreader height will be left big so that curve can be cut.
- Top will be cut to finished length but left wide to allow for curves to be cut out.
- Competitors will be given a piece of ¼" MDF to create the template for the curves. The template is to be done during competition and not brought with you.

We will be setting the router tables and suppling all the bits for the project. We will also be providing jigs for their safe operation.

Refer to the contest description to see what tools will be in the competition area as well as the tools you can bring into the area.

We feel that the project is a good challenge of both hand and power tool use and look forward to seeing the finished projects!

Thanks for competing,

Joinery Committee
